Love for Genetics!

My life was balanced, like a 'balanced translocation' Living merrily with a sense of satisfaction! Passionate to know the 'Genes' at the source of incarnation, My DNA received a 'cryptic gain' with fire in the soul and determination! It was curiosity, learning, enquiry in 'Array' Understanding genetics with infinite possibilities every day! Tried performing RFLP, MLPA and PCR Reached near the 'gain' with efforts so hard! Finally reached that 'allele' of the DNA By sequencing the exome, all the way. And there lies the mutation in a 'gene' 'Gain of function' was the situation I thank God, I got mutated, For the love of genetics

feels perfectly motivated!
